

Project Management Master Classes

Essential Training to Develop Skills

The Project Management Master Classes provide an opportunity for experienced Construction and Project Engineers to develop business management skills and to enhance key knowledge areas in the Engineering Construction Industry (ECI).

The internationally recognised Master Classes are offered in partnership with the European Construction Institute.

Purpose of the programme

The programme provides delegates with the opportunity to develop their knowledge and understanding of topical issues relating to project management within the ECI.

The suite of Master Classes is designed to enable individuals to take a more effective and innovative role in the management of construction related activities. By exchanging and developing ideas at these Classes they are able to improve their working practice.

Who should follow the programme?

The Master Classes are, by their nature, aimed at Lead and Senior Engineers and Project Managers. They rely on a significant degree of personal experience in the ECI, and/or related project management, to enable individuals to identify with and rationalise the discussion topics into their own working environment and to contribute meaningfully to the discussions.

The programme in detail

The primary focus is on developing and applying specialist project management understanding using real and relevant projects as a basis for discussion. The secondary focus is to bring individuals up to speed with the key ECI knowledge areas. Led by 'world class' experts in their field, the series of Classes allows project professionals to develop an appreciation for best practice techniques and processes used within projects.

The following Project Management Master Classes are available:

- ▶ New Technology in Construction
- ▶ Claims Management
- ▶ Fast Track Projects
- ▶ Managing People on Projects
- ▶ Risk Analysis and Management
- ▶ Project Development and Definition
- ▶ Whole Life Value
- ▶ Global Safety
- ▶ Multi Cultural Project Team Working

The Master Classes are highly interactive in style with presentation discussion and case study inputs, enabling project management practitioners to explore topics of current interest to engineering construction.

The Benefits of Project Management Master Classes

Organisation

- ▶ Employees bring added value to the business by improving their ability to solve problems through innovative methods.

Individual

- ▶ Maintains up-to-date knowledge and understanding of topical issues of relevance to the industry.
