2019 OIL & GAS PROJECT MANAGEMENT CONFERENCE

Next Generation Project Management

Thursday 7th November 2019

P&J Live (TECA)

Eastburn Road, Stoneywood
Aberdeen AB21 9FX

A project management exhibition will run alongside the conference sessions.

As the economic landscape changes and MER becomes more of a focus in the North Sea, project managers face new challenges in delivering value for their organisations. Outside of the oil and gas world, the project management world is evolving, and this also affects our sector. Coupled with advances in technical capability, changes in the working environment, and the emergence of a new generation of project managers, these will all alter the way that we do projects.

The ECITB's 2019 conference will focus on how project management has, is and will evolve to bring benefit to project practitioners and stakeholders. Project professionals will be invited to hear about new developments, ask questions and join the discussion. In particular, younger project managers may be interested in how they can influence, and how they will be influenced by, these advances.

As well as highlighting new developments in the discipline, practical examples of how these are being used will be offered. Drawing on contributions from both within and outwith the industry, conference topics will include:

- Advances in technology, including "digital project management"
- Changes in behaviours and competence
- Improved project management methods
- Increasing agility and speed of delivery

SPEAKERS

Martin Paver
Chief Executive
Officer
Projecting Success Ltd

Rob Leslie-Carter
Director
Arup

Stephen Mulva
Director
**Construction Industry Institute,
The University of Texas, Austin**

Martianthi Leon
